ABOUT ME

Engineer with a profound passion for programming, currently the Marketing Technology Manager for Titan Vans and Timber Van Kits in Boulder, CO. I leverage diverse experiences across UX design, software development, and marketing technology to build innovative and impactful products.

SKILLS

Java, Javascript, HTML, CSS, Python, Python-based libraries, SQL, MySQL, SQLITE, PostgreSQL, SQLAlchemy, C/C++, React, Flask, Render, Relational Databases, GIT, Github.

EDUCATION

University of Colorado, Boulder | Bachelor of Science in Applied Computer Science

(JAN 2021 – DEC 2023 | BOULDER, CO)

BrainStation | User Experience Design Diploma

(JAN 2021 - APRIL 2021 | ARVADA, CO)

University of Colorado, Boulder | Bachelor of Arts in Philosophy & Psychology

(JAN 2011 – DEC 2018 | BOULDER, CO)

EXPERIENCE

Marketing Technology Manager | Titan Vans & Timber Van Kits

(MAR 2026 – PRESENT | BOULDER, CO)

- Own the marketing technology stack for two sister brands building custom camper vans and DIY van conversion kits.
- Bridge design, data, and engineering: website development, analytics and tracking, CRM and marketing automation, and campaign reporting.

Measure Technician | Home Depot (HDMS)

(OCT 2021 – 2025 | BROOMFIELD, CO)

- In-home advisor and flooring associate for Home Depot Measurement Services. Detailed floor measurements and created quotes through a HD Salesforce app.

Driver (DSP) | Amazon

(JULY 2020 – JAN 2021 | ARVADA, CO)

- Delivered packages by meticulously following customer support policies and delivery preferences for multiple different areas in the Denver, CO area.

Direct Care Professional (DCP) | Devereux, Advanced Behavioral Health

(FEB 2019 – JULY 2020 | WESTMINSTER, CO)

- Awarded Leader of the Month & Most Positive Personality of 2020.

PROJECTS

Healthcare Database | University of Colorado, Boulder

(AUG 2023 – DEC 2023 | Pinned on Github)

- Engineered a MySQL database to map hospital entity relationships, utilizing a Python stack in Jupyter for complex SQL queries with SQLAlchemy.

Blood Bank Database | University of Colorado, Boulder

(JUNE 2023 – AUG 2023 | Pinned on Github)

- Created a web-based system for blood bank operations, with features for data verification, patient-to-donor matching, and inventory visualization, employing SQLite, PostgreSQL, and Flask for robust data handling and user interaction

Data Mining Energy Trends | University of Colorado, Boulder

(AUG 2023 – DEC 2023 | Pinned on Github)

- Analyzed global energy trends using SQL and Python, including Pandas and NumPy, to execute data cleaning, preprocessing, and integration, with visualizations highlighting key consumption and production patterns.
